Other Graph Algorithms

Now that you are familiar with Dijkstra's algorithm for finding the shortest path in a graph, then you're well-equipped to understand more graph algorithms. This document will discuss two other important algorithms: Depth-First Search (DFS) and the Bellman-Ford algorithm.

1.1 Depth-First Search

Depth-First Search (DFS) is an algorithm for traversing or searching tree or graph data structures. DFS uses a stack (or sometimes recursion which uses the system stack implicitly) to explore the graph in a depthward motion until it hits a node with no unvisited adjacent nodes, then it backtracks.

The procedure is as follows:

- 1. Push the root node into the stack.
- 2. Pop a node from the stack, and mark it as visited.
- 3. Push all unvisited adjacent nodes into the stack.
- 4. Repeat steps 2 and 3 until the stack is empty.

DFS is particularly useful for solving problems such as connected-component detection in graphs and maze-solving.

1.2 Bellman-Ford Algorithm

The Bellman-Ford algorithm is another shortest path algorithm like Dijkstra's. However, unlike Dijkstra's algorithm, Bellman-Ford can handle graphs with negative weight edges.

The algorithm works as follows:

- 1. Assign a tentative distance value for every node: set it to zero for our initial node and to infinity for all other nodes.
- 2. For each edge (u, v) with weight w, if the current distance to v is greater than the

distance to u plus w, update the distance to v to be the distance to u plus w.

- 3. Repeat the previous step |V| 1 times, where |V| is the number of vertices in the graph.
- 4. After the above steps, if you can still find a shorter path, there exists a negative cycle.

If the graph does not contain a negative cycle reachable from the source, the shortest paths are well-defined, and Bellman-Ford will correctly calculate them. If a negative cycle is reachable, no solution exists, but Bellman-Ford will detect it.

This is a draft chapter from the Kontinua Project. Please see our website (https://kontinua.org/) for more details.
